ABOUT

As a dedicated software engineer with over three years of experience, I have thrived in the vibrant technological landscape of Ho Chi Minh City, Vietnam. My career is marked by a commitment to innovating systems and applications, where I take pride not only in delivering advanced solutions but also in driving company growth and advancing my own career.

EDUCATION

Ho Chi Minh City University of Education

Bachelor of Information Technology Software Technology

Ho Chi Minh City

June 2022

- **GPA:** 3.33/4.0
- **Honors:** Received an excellent student scholarship from the university for third consecutive semesters.

TECHNICAL SKILLS

Backend:

- C#, OOP, Data Structure - Algorithm, SOLID, Design Patterns.
- NET Framework/Core, Dapper, Entity Framework, Minimal API, Restful API, gRPC
- Microservice, Clean Architecture, Dapr.
- Elastic Search, RabbitMQ, Apache Kafka, Redis Cache.

Frontend:

- HTML, CSS, JavaScript/TypeScript.
- ReactJS.

Database:

- SQL Server (Stored Procedure, Function, Trigger, Execution Plan, Query Optimization).
- PostgreSQL.

DevOps:

- Linux, Ubuntu Server, Docker, Docker Compose.
- Nginx, Helm, Minikube (K8S), ELK.

Source Control:

- Git, Github, Gitlab, GitKraken.

SOFT SKILLS

- English: basic.
- Agile Methodology – Scrum.
- Presentation – Communication – Teamwork.
- Problem - Solving.
- Willingness To Learn

WORK EXPERIENCE

ACFC & VFBS

Role: .NET Developer

November 2023 – Present

Project: Ecommerce – Popeyes Chicken

Technologies: C#, .NET Core 7, Minimal API, Design Patterns, PostgreSQL, Microservice, Clean Architecture, CQRS, MediaR, GRPC, Dapr, Redis, ELK, Docker, Docker Compose, Minikube, Ubuntu Server, Restful API, ReactJS, Redux Saga.

Team size: 15 members

Responsibilities:

- Participated in deploying the Popeyes fried chicken sales system with features including product management, promotions management, ordering, customer management, and more.
- Develop the Use Delivery Zones solution. This solution utilizes various algorithms and data processing techniques to create delivery zones, enabling internal staff to identify customers ordering food within the delivery area of the nearest store. This facilitates quick purchase and delivery, enhancing customer experience and convenience.
- Deployed the AddressSuggest service using Elasticsearch technology to optimize costs by reducing reliance on Google API. This feature is currently undergoing UAT testing and is estimated to reduce costs by 25-30%.
- Set up Ubuntu servers and deployed (API-UI) the project to the UAT environment using Docker, Helm, Minikube, Nginx, ELK stack, and other tools.

KIOTVIET

Role: .NET Developer

April 2023 – November 2023

Technologies: C#, .NET Framework, .NET Core, Design Patterns, Microsoft SQL Server, MongoDB, Service-Stack, REST APIs, JavaScript, RabbitMQ, Redis.

Team size: 100 members

Responsibilities:

- Join in maintaining, optimizing performance, and developing new features for the existing KiotViet Retail product.
- Optimize caching for APIs, reducing response time from 2 seconds to less than 100 milliseconds by utilizing Google's Protocol Buffer for decoding and storing data in Redis cache.
- Create and optimize queries and stored procedures with high latency, leading to timeouts and poor user experience.
- Develop new features and add additional APIs for external access to facilitate partnerships.
- Collaborate with the team to deploy the dynamic configuration project, facilitating centralized configuration management for various settings such as ConnectionStrings, Redis Connections, RabbitMQ, etc.
- Additionally, the team deploys the multi-currency project to expand the KiotViet Retail product into neighboring countries.

FPT TELECOM

Project: INSIDE GLOBAL OPENNET - SYSTEM MANAGEMENT TELECOM

Role: .NET Developer

May 2021 - Mar 2022

Technologies: .NET Core API, Razor Page, HTML/CSS, JavaScript, JQuery, KendoUI, SQL Server, Dapper, Git/Gitlab.

Team size: 40 members

Responsibilities:

- Learn project business requirements, project structure.
- Build shared layouts for clusters of functions.
- Build information declaration functions.
- Use Kendo UI library to make reports.
- Handling the logic of assigning cases to perform deployment - maintenance for telecommunications contracts.
- Providing APIs for Mobile Teams – AI

Project: INSIDE PARTNER - SYSTEM MANAGEMENT TELECOM VIETNAM

Role: .NET Developer

Mar 2022 - Mar 2023

Technologies: .NET Core API, Microservice, Kafka, Clean Architecture, CQRS, Razor Page, Dapper, HTML/CSS, JavaScript, JQuery, KendoUI, SQL Server, Git/Gitlab.

Team size: 30 members

Responsibilities:

- Learn project business requirements, project structure.
- Build shared layouts for clusters of functions and code common functions for the entire project.
- Update Oracle stores to meet new business functions.
- Detect business errors from the old version and fixed them.
- Providing APIs for Mobile Teams.
